High-Grade Gold Production in Prolific Region of Mexico with a focus on Optimization and Growth

Resource Definition & Growth

- Updated Mineral Resource Estimate expected in late 2024
- Near mine Resource growth potential in La Prieta, Palos Chinos targets
- Long-term District potential with La Haciendita target containing small historical workings with high-grade chip samples

Optimizing for Profitability

- Focus on optimizing operations to improve profitability at the mine and mill
- Capital investments in the mill, such as new vibrating screen, aimed at improving grades and recoveries
- New Falcon concentrator installed in July 2024 has produced additional saleable gravity concentrate and reduced gold grade to tailings

Cost Reduction

- Cost cutting efforts over last 2 months resulting in positive operating margin in July 2024

New Focused & Lean Management Team

- New Corporate leadership has extensive experience mining in Latin America and Mexico specifically
- New mine GM, +30 years experience, including +10 years at San Dimas Mine and GM of Cusi Mine

DynaResource Inc. owns and operates the high-grade San Jose de Gracia gold-silver mine located in Sinaloa State, Mexico, in the center of the Sierra Madre Occidental belt.

The Mine has been in operation for 8 years with production reaching ~25,000 gold ozs (800 tpd) in 2024. Conventional cut and fill mining is used followed by crushing, grinding and flotation to produce a high value gold concentrate.

The district scale San Jose de Gracia land package consists of 33 contiguous concessions totally over 10,000 ha. The historic Mineral Resource Estimate of approximately 1.1M ounces of gold suggests a significant mine life even under conservative resource conversion conditions and considering mine depletion. The majority of the land package remains unexplored.

The Project has a long history in the region with the first gold discovery in 1828 and artisanal mining of bonanza grade zones dating back to 1892 with modern exploration commencing in the 1990s.

Production History Highlights:

- Production began in 2016 with throughout rate of 100tpd growing to approx. 800tpd in July 2024
- Gold production increased from 10,836 ounces in first year of production to 31,905 in 2022

Near-Mine Growth Potential

- Growth potential remains in primary deposits under production; Tres Amigos, San Pablo Sur + Este, and La Mochomera
- Additional near-mine known targets underexplored

Regional Growth Potential

- Extensive land package still minimally explored
- Multi-million gold ounce potential
- Total drilling of only 121,241 meters to discover over 1Moz resource
- High success rate at the drill bit
- Discovery cost < \$20/oz Au
